Lamdag: A Proposed Masterplan for the Relocation and Development of the Ormoc City Government Center in Barangay Sumangga

Type:

Government Centre

Area:

48.85HA.

Location

Brgy. Sumangga, Ormoc City

Year

2025-2026

Lamdag is an undergraduate architectural thesis that proposes a future-ready government center for Ormoc City through the relocation and consolidation of key public offices into a unified civic district in Barangay Sumangga. The project responds to existing challenges of dispersed government facilities, urban congestion, limited accessibility, and growing administrative demands. Guided by principles of accessibility, sustainability, resilience, and cultural identity, the masterplan integrates institutional spaces, public open areas, circulation networks, and provisions for future expansion within a centralized government complex. Through site analysis, stakeholder engagement, planning standards, and data-driven spatial strategies, the proposal envisions a government center that improves service delivery while strengthening civic identity and supporting long-term urban growth for Ormoc City.

SITE DEVELOPMENT PLAN

The proposed government center was shaped through a step-by-step planning process, from site analysis and zoning to green space integration and circulation planning, resulting in a cohesive masterplan that promotes accessibility, sustainability, efficient public service, and long-term growth.

02 PUBLIC LIBRARY_____

Project:

DAHON: Proposed Cebu City Public Library

Type:

Library

Area:

3.7HA.

Location

lot adjacent to Banilad Rd and accessible from IT Park

Year

2023

The proposed modern public library aims to redefine the traditional concept of libraries by embracing innovation, accessibility, and community-centric design. Envisioned as more than just a repository of books, this library will be a vibrant hub of learning, creativity, and collaboration. It will integrate cutting-edge technology, sustainable architecture, and diverse cultural programming to cater to the evolving needs of society.

Serving as a bridge between the past and the future, the modern public library will offer flexible spaces for study, co-working, and social engagement while providing access to digital resources, multimedia content, and hands-on learning experiences.

DESIGN CONCEPT

PHASE 2

Dahon introduces a three-stacked box configuration, symbolizing the progressive growth of knowledge and the interconnected layers of learning.

PHASE 1

The design for Dahon—the proposed modern library—begins with a simple box as its foundational form, symbolizing the clarity and universality of knowledge found in a book. Inspired by the concept of a "leaf" (the meaning of dahon in Filipino)

PHASE 4

Merging the simplicity of its original concept with the dynamic evolution of its earlier phases. The final shape integrates the three stacked and deformed boxes into a cohesive architectural masterpiece that embodies the library's essence—a place of growth, connection, and transformation.

PHASE 3

Phase 3 of Dahon explores the concept of deformed boxes, representing the dynamic and ever-changing nature of knowledge and innovation.

03 LAO RESIDENCE_____

Project:

Reimagined Lao Residential House

Type:

Residential House

Area:

1500SQM

Location

Brgy. Luna, Ormoc City

Year

2026

This project reimagines our existing family home and lot into a contemporary tropical residence that strengthens the relationship between architecture, landscape, and everyday living. Rather than completely transforming the house into something unfamiliar, the design intentionally preserves the essence and feeling of the original home—retaining the comfort, openness, and memories associated with the existing place.

The proposal focuses on improving spatial programming by reorganizing and redefining spaces to better support current and future lifestyles. Existing underutilized areas are transformed into more purposeful living environments, while stronger indoor–outdoor connections, enhanced natural lighting and ventilation, and integrated landscape elements create a more seamless and calming residential experience. The result is a home that feels familiar yet renewed—an updated interpretation of the existing house that respects its identity while elevating its functionality, comfort, and overall quality of living.

PROPOSED FLOORPLAN

TOTAL GROSS AREA: 92m²

This proposal reimagines our existing family home and lot with a focus on creating a more manageable and comfortable living environment for the future. As my parents grow older and me and my siblings are going to have our own lives in the future, daily upkeep becomes more physically demanding, the design prioritizes ease of maintenance while preserving the qualities that make the house feel familiar and meaningful. Rather than completely transforming the existing home, the proposal builds upon its character and strengthens its relationship with everyday living.

Through improved spatial programming, underutilized and high-maintenance areas were reorganized into more purposeful and efficient spaces that support simpler daily routines. The layout promotes better functionality, reduced maintenance demands, and stronger connections between indoor and outdoor living. The result is a home that remains warm and homely in character while becoming more practical, comfortable, and sustainable for long-term family life.
